The following is an examiner's statement of reasons for allowance: ***

A method for visibility culling, comprising: (A) modulating a first height field as a function of distance to obtain a perspective modulated height field; and (B) generating an occlusion height field based on an orthographic height propagation of the perspective modulated height field.

A routine for hardware-accelerated visibility culling, comprising: drawing an original height field to obtain a first image in a frame buffer color channel; drawing a polygon of the same size as the domain of a height field with a constant color representative of the height at a viewpoint to obtain a second image in the frame buffer, said drawing including blending to subtract the polygon color from the first image frame buffer color, the reference height field being equal to the original height minus the constant color height; drawing a perspective modulation disk, blending to modulate the second image frame buffer color channel value by the texels in the first texture, and storing a resultant perspective modulated image as a second texture addressed by a second set of texture coordinates; and drawing an updated shift disk with texture mapped from the second texture, including blending with a maximum blending function that saves a maximum height value between two compared sampling locations along radial directions on the shift disk.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
